

# SCOTTIE RESOURCES INTERCEPTS 194 G/T GOLD OVER 2.40 METRES ON BLUEBERRY CONTACT ZONE

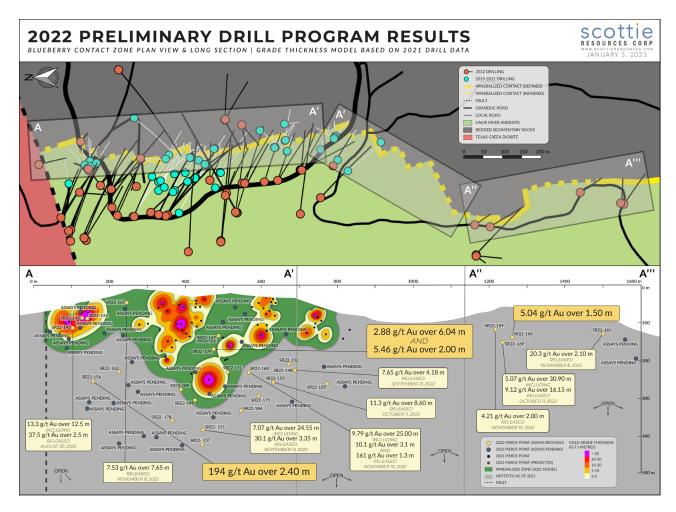

**Vancouver, BC – January 5, 2023 –** Scottie Resources Corp. ("**Scottie**" or the "**Company**") (TSXV: SCOT OTCQB: SCTSF FSE:SR8) is pleased to report new assays on its Blueberry Contact Zone including intercepts of 194 g/t gold over 2.40 metres and 4.61 g/t gold over 2.5 metres in hole SR22-156. The Blueberry Contact Zone is located 2 km north-northeast of the past-producing high-grade Scottie Gold Mine, 35 kilometres north of the town of Stewart, BC, along the Granduc Road. The Blueberry Contact Zone is 100% owned and royalty free.

**Table 1:** Selected results from new drill assay results (uncut) from the Blueberry Contact Zone.

Drill Hole		From (m)	To (m)	Width* (m)	Gold (g/t)	Silver (g/t)
SR22-156		119.5	120.5	1.00	2.49	14.0
		148	150.4	2.40	194	16.8
		255	257.5	2.50	4.61	0.0
SR22-160		39	43	4.00	1.26	10.8
	including	42	43	1.00	4.12	10.0
		61.57	62.2	0.63	2.52	9.0
		87	88.5	1.50	5.04	2.0
		104	105	1.00	1.72	11.0
		125	126	1.00	1.04	50.0
SR22-179		64	65	1.00	3.31	10.0
		184.5	190.54	6.04	2.88	2.6
	including	188.54	190.54	2.00	5.46	7.0

<sup>\*</sup> True thicknesses of mineralized intercepts are undetermined

President and CEO, Brad Rourke: "Across all our targets, hole SR22-156 is the highest-grade intercept that Scottie has ever drilled. Its location significantly expands our bonanza grade zone at the north end of the Blueberry contact structure and we are still awaiting on additional assays down plunge from this sizeable gold hit. The grades at depth continue to reinforce that we are exploring a robust system that has substantial upside."

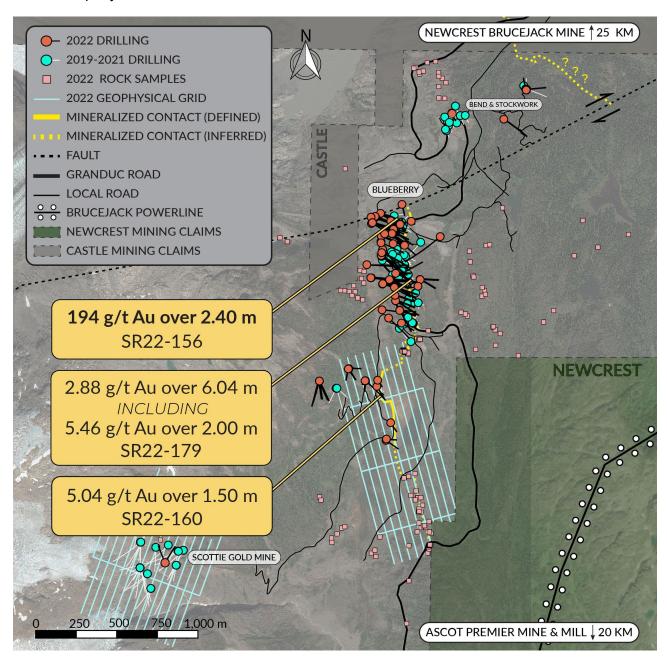

**Figure 1:** Segmented vertical long section of the Blueberry Contact Zone and plan view illustrating the distribution of the sections. Highlighting the distribution and status of drilled targets from the 2022 season and the reported results thus far, grade contour model was created from pre-2022 drilling of the structure.

### About the Blueberry Contact Zone

The Blueberry Zone is located just 2 kilometres northeast of the 100% owned, past-producing Scottie Gold Mine located in British Columbia, Canada's Golden Triangle region. Historic trenching and channel sampling of the Blueberry Vein include results of 103.94 g/t gold over 1.43 metres, and 203.75 g/t gold over 1.90 metres. Despite high-grade surficial samples and easy road access, the Blueberry Vein had only limited reported drilling prior to the Company's exploration work. The target was significantly advanced during Scottie's 2019 drill program when an interval grading 7.44 g/t gold over 34.78 metres was intersected in a new splay zone off of the main Blueberry Vein. The drill results received in 2020 and 2021, coupled with surficial mapping and sampling suggest that this splay is in fact a major N-S mineralized structure, of which the Blueberry Vein was only a secondary structure. This zone is much wider than pursued in previous exploration models and drilling in 2022 has expanded its strike length to >1,450 metres and its depth to 390 metres. The zone is steeply dipping, and there is no current restraint on its potential depth; the mineralization at the adjacent Scottie Gold Mine has a vertical extent greater than 450 metres. The Blueberry Zone is located on the Granduc Road, 20 kilometres north of the Ascot Resources' Premier Project, which is fully financed for construction (Dec 12, 2022). Newcrest's Brucejack Mine is located 25 kilometres to the north.

Thomas Mumford, Ph.D., P.Geo and VP Exploration of Scottie, a qualified person under National Instrument 43-101, has reviewed the technical information contained in this news release on behalf of the Company.

**Figure 2:** Overview plan view map of the Scottie Gold Mine Project, illustrating the distribution of the most recent results, and the overall scope of the 2022 drill and the completed 2022 loop electromagnetic geophysical grids.

## **Quality Assurance and Control**

Results from samples taken during the 2022 field season were analyzed at SGS Minerals in Burnaby, BC. The sampling program was undertaken under the direction of Dr. Thomas Mumford. A secure chain of custody is maintained in transporting and storing of all samples. Gold was assayed using a fire assay with atomic absorption spectrometry and gravimetric finish when required (+9 g/t Au).

Analysis by four acid digestion with multi-element ICP-AES analysis was conducted on all samples with silver and base metal over-limits being re-analyzed by emission spectrometry.

#### ABOUT SCOTTIE RESOURCES CORP.

Scottie owns a 100% interest in the Scottie Gold Mine Property which includes the Blueberry Zone and the high-grade, past-producing Scottie Gold Mine. Scottie also owns 100% interest in the Georgia Project which contains the high-grade past-producing Georgia River Mine, as well as the Cambria Project properties and the Sulu property. Altogether Scottie Resources holds more than 59,000 hectares of mineral claims in the Stewart Mining Camp in the Golden Triangle.

The Company's focus is on expanding the known mineralization around the past-producing mines while advancing near mine high-grade gold targets, with the purpose of delivering a potential resource. The Company's focus is on expanding the known mineralization around the past-producing mine while advancing near mine high-grade gold targets, with the purpose of delivering a potential resource.

All of the Company's properties are located in the area known as the Golden Triangle of British Columbia which is among the world's most prolific mineralized districts.
